

What you need to bring to our course?

For Friday night, we don't need anything. We will review what will be required for Saturday and Sunday. We will also have the weather forecast for Saturday and Sunday. We will discuss what we might need to manage the weather.

As for Saturday and Sunday, We require the following:

A Certified Helmet. Meaning a helmet that has been certified for highway use. We have a preference for full faced helmets, but all we require for the course is a certified helmet. On the lower outside back of the helmet there should be a DOT marker or something similar like ECE 22-05.

Eye Protection. Eyes Covered. Whether it be by sunglasses, prescription glasses, safety glasses or a flip up helmet visor.

At a minimum, a Denim Jacket and Denim Jeans. If you have a specific motorcycle jacket, consider yourself better protected. However all we need for the course is a denim level of abrasion resistance that you will find with your typical jeans. No rips at the knees please.

Close-Fit
Mechanic's Gloves
Spandex and microfibre.
(8631590) - Large

Full-Fingered Gloves. Nothing fancy required here, but avoid anything bulky as these often hinder the use of our hand controls. As you can imagine, motorcycle gloves would be ideal, but something like mechanics gloves or something similar will work fine.

Shoes or Boots that cover the ankle. Hiking boots work well, as well as high top or 3/4 high sneakers. If you lift your pants up from the bottom, and we can see your ankle bone, they are not acceptable. Work boots are fine as well. Steel toe boots are fine from a safety standpoint, however we have found that some steel toed boots that feature a tall toe cap often make shifting more difficult. Low-cut running shoes are not acceptable.
